Subject: (E15601) Mid Valley Pipeline Oil Spill - update
Date: Tuesday, October 14, 2014 11:11:10 AM

I received an update from Bill. He is working with LSP to establish unified command. START is currently conducting an assessment. We hope to have photos and a map soon. Bill will be conducting an aerial assessment of the spill via helicopter. So far, oil has been contained to the creek and bayou and has not entered Caddo Lake. The estimated spill volume continues to be 4000 barrels. The RP continues to add resources to the incident. Based on his initial incident size up, Bill does not believe he needs additional EPA personnel to assist him at this time. Bill expects to request the MCP once a staging area has been identified.
